## Contents

**Computer simulation in education** ................................................................. 10  
*V. M. Soloviev.* Universal tool for simulation of complex systems .............. 10  
*O. Ye. Ostapchuk.* Synergetic principles of the science of the humanities and sciences ................................................................. 15  
*V. M. Soloviev, Yu. V. Temnyuk, V. V. Govorun.* Construction of indicators-precursors DDoS-attack means the theory of complex systems ... 21  
*H. B. Danylchuk.* Application econophysics modeling methods in the training of the economy ................................................................. 26  
*M. V. Moiseienko, S. V. Shokaliuk, N. V. Moiseienko.* Elements of computer modeling in training of teachers in chemistry and informatics ...... 31  
*A. I. Solohub, A. A. Solohub.* Modeling of profile creative scientific learning of high school students ......................................................... 35  
*N. O. Zinonos.* Using of the students’ adaptation model for teaching foreign students ........................................................................... 42  
*V. H. Lohvinenko.* Model of quality of blended learning of students of higher agricultural institutions in the learning of computer sciences ........ 47  
*N. V. Rashevsk, A. M. Rashevsk.* Model formation of research competencies of pupils on mathematics lessons using ICT .................. 52  
*V. V. Korolskii.* Geometric interpretation of numerical series .................... 57  
*V. V. Korolskii, S. V. Shokaliuk.* Modeling and generating a multiple tasks the calculation quadrature parabolas ............................................. 63  
*I. A. Kotov.* Formalization of models of ontologies in educational complexes for electric power specialties .......................................... 68  
*M. S. Zhukov.* Definitions dynamic properties of virtual objects ............... 73  
*M. G. Dolotii, P. V. Merzlykin.* The random number generator with hardware source of entropy ................................................................. 85  
*L. O. Fadieieva.* Software for material cutting in furniture industry .......... 88  
*S. A. Shevtsov.* Development of three-dimensional computer-based model of macroscopic bodies system in a gravitational field ..................... 97  
*O. O. Shumeiko, A. O. Iskandarova.* Construction IRT profiles using piecewise linear regression with free nodes [article announcement] .... 98  
*A. E. Kiv, N. O. Mykytenko.* Molecular dynamics probing of the energy spectrum of particles in radiation stimulated processes [article announcement] ............................................................................. 99
Information and Communication Technology in education ............... 100
K. I. Slovak. On the need to study the experience use of ICT in higher education of the USA ................................................................. 100
V. V. Solovyova. Information and communication technology as factor the future specialists in finance professional training ................................ 109
A. I. Solohub, T. O. Saprykina. Computerization of creative learning of natural sciences of high school pupils ........................................ 113
V. R. Burachenk. Optimizing range of information tools support the educational process in higher school ............................................. 119
N. A. Kharadzhian, I. O. Pykhtina. The automation of forming the volume of educational work for departments at institution of higher education .... 124
M. M. Ivanov. Automated control system of educational process ............ 127
S. V. Ahadzhanova, O. B. Viunenko, A. V. Tolbatov, K. H. Ahadzhanov-Gonsales, V. A. Tolbatov. Functions and features major components monitoring distance education at the universities .................................. 131
O. I. Pursky, S. O. Bannikova, D. P. Mazoha. Development and using technology Web-based training system for management in e-trade business processes in the framework of teaching «e-commerce» ............ 140
O. V. Anisimov, V. P. Salij, Y. V. Tryus. Web-resource to perform mathematical operations on fuzzy numbers and intervals ..................... 145
V. V. Gorbunov, D. V. Petrov. Improvement of automated system for students’ knowledge level evaluation .............................................. 150
A. S. Zelensky, V. S. Lysenko. Experience in studying 3D graphics in the educational process ................................................................. 154
O. A. Mukoseenko. Let us play detective games at computer lessons ....... 167
V. L. Buzko, Yu. V. Echkalo. Gamification as a mean of forming of cognitive interest in physics teaching ............................................... 171
T. V. Hruntova. Mobile learning tools of physics in forming of practical skills of future professionals ...................................................... 176
M. A. Sluissenko, N. A. Kharadzhian. Using a Wolfram|Alpha web-service in the physics study ............................................................... 180
A. P. Shamshin. Remote lab in physical practice ................................... 185
V. V. Tkachuk, S. O. Semerikov, Yu. V. Echkalo. Creation of electronic educational and methodical complex in the mobile-oriented learning environment of higher educational institutions ....................... 189
M. A. Kislova, A. A. Gorshkova. Computer mathematics system as part of mobile learning environment in higher mathematics................................. 197
D. Ye. Bobylyev, M. V. Popel. Support for independent students’ work by tools SageMathCloud in the learning of «Differential equations» for future mathematics teachers ............................................................. 201
N. L. Sosnycka, G. O. Onischenko. The use of information and communication technologies at lessons discrete mathematics............................. 206
A. O. Kovalenko. Forming research competence in the study mathematics using ICT ........................................................................................ 210
O. M. Potapova. The organization of research activities of future engineers while learning higher mathematics with the use of ICT tools .... 215
T. G. Kramarenko, G. M. Bilousova. The study of functions of several variables on an extremum ................................................................. 220
T. V. Prydacha. Using the cloud technology to form the students’ social competence in learning mathematics .................................................... 223
M. P. Shyshkina, M. V. Popel. The cloud-based learning environment based on SageMathCloud ................................................................. 227
O. M. Markova. The overall structure of cloud computing tools for teaching the basics of mathematical informatics ...................................... 231
D. S. Pavlovska. Cloud technology tools for computer science learning by the high school students of information technology profile ........ 235
I. S. Mintiy, N. A. Kharadzjan, S. V. Shokaliuk. IC competencies development of pedagogical higher educational institutions lecturers by certification training program “Information and communication technologies in the regular-distant (combined) learning”................................................................. 240
I. V. Onischenko. The role of mass open online courses in the organization independent work of the future elementary school teachers .......... 245
V. B. Khotskina, Zh. V. Tsymbal. Methodical aspects of teaching discipline “Work in MATLAB package”............................................................. 250
O. V. Yurko, Yu. V. Yurko. The algorithms for work with large image oriented to data processing features of human ........................................ 257
D. H. Medvediev, V. M. Pirohov. Review of tools for latent and semantic analysis.......................................................................................... 261
I. M. Teslya, I. L. Khlevna, N. O. Chorna. IT education in Ukraine: learning through practice ................................................................. 264
S. M. Ishcheriakov. Vocational training of school teachers in programming as the basis of high-quality IT education [article announcement] ............ 267
